Tashina S

Hi, Anik,

I'm developing a compliance-driven employment technology platform and I'm exploring how you might be able to assist. At this stage, I need to understand if you have experience with both front-end and back-end development. Specifically:

Building secure web portals with client logins and dashboards

Designing the back end (secure databases, APIs, role-based access, audit logs)

Integrating with e-signature APIs (DocuSign, Adobe Sign, or similar)

Handling sensitive data securely (encryption, masking, purge policies)

Before moving further, could you let me know:

Do you personally handle both front-end and back-end development, or do you specialize in one?

Have you built systems that involve secure data workflows or e-signature API integrations before?

What would you need from me (feature list, diagrams, etc.) to scope a project like this?

I'm looking for someone reliable and trustworthy for ongoing work if there's a good fit. Please let me know if this aligns with your expertise.

Thank you!

This message relates to:

I will do mobile app development  
android ios app development  
flutter developer saas app

Me

Hello Tashina,

Thank you for choosing me to assist you.

I'm truly excited about the opportunity to support your employment technology platform.

With my expertise, I can deliver a solution that's impactful, user-friendly, and aligned with your vision.

I'm confident this collaboration will bring real value to your project.

Looking forward to creating something great together.

Best regards,

Anik

Tashina S

I am receiving many inquiries. I will respond as soon as I can. Thank you!

Me

Thank you for your kind response.

please take all the time you need.

I'm truly excited about your upcoming app and committed to turning your vision into something impactful.

Looking forward to creating something remarkable together.

Tashina S

Thank you for your interest. To give you some context, we're building a compliance-focused employment technology platform. The system will require:

A web portal where clients can log in and manage accounts

A secure back-end database for sensitive data (e.g., Social Security numbers) with encryption/masking

Audit trails and logging to support compliance (consent, disputes, reporting)

API integrations with e-signature providers (DocuSign, Adobe, or similar)

Role-based access controls (different permissions for candidates, employers, admins)

Basic reporting features for employers

At this stage, I'm only sharing high-level details so I can evaluate skills and fit. Once I decide who I'll move forward with, I'll provide the full project specifications under NDA. I hope you understand this approach—it's simply to protect our concept while we explore the right partnership.

Our goals: In the short term, we want to launch a secure MVP with login, database, and e-signature integration so we can begin pilot testing with employers. Over the next 1-2 years, we aim to scale into a trusted compliance platform with advanced reporting, strong security, and the ability to handle sensitive data at volume.

Best,  
Tashina

Me

Thank you so much for sharing your thoughts.

I'm truly excited about the opportunity to collaborate on your amazing project.

If you're available, it would be fantastic to jump on a meeting right now to explore how we can make this project truly exceptional.

I'm ready and eager to get started, looking forward to connecting with you.

Best Regards,  
Anik
